

Dear colleagues,

The International Research Centre for Renewable Energy (IFEED) has created on behalf of the FAO/UN the concept of the Integrated Energy settlements. A mix of renewable energy is used not only to cover the energy needs, but also to create improvement in the basic living conditions for the people living in a village and its surroundings people. To date, the planning for about 10 projects have been created worldwide. With the Wierther project we have succeeded, for the first time, to implement all elements of the UN concept in Wierthe, Lower Saxony, Germany.

On behalf of IFEED Board, we cordially invite you to the official inauguration and presentation of our project on

Friday, October 16th, 16:30 o'clock

**at the Solarpark Alte Zuckerfabrik, Fabrikstraße 6 in Vechelde – Wierthe,
Lower Saxony, Germany**

Afterwards, please join us for finger food and drinks and the opportunity to interact with the staff of the commercial enterprises, schools and the Power Field Association. With the subsequent transition of the newly created fruit plantation, Dipl. Biologist Ms. Helling will give information on the planning and project implementation of the fruit orchard.

The final event is a delicious apple cider from our orchard.

We look forward to your participation and for your feedback.

Best regards,

The Executive Board

i.A.

Marcia Schlichting

International Secretary

International Research Centre for Renewable Energy (IFEED)
